03rd Sep 2020

To

Dr D V Ramana
Data Strategist,
Independent Consultant,
Wissen Infotech ,
Hyderabad.

Dear Sir,

Sub: Letter of Appreciation.

Thank you very much for delivering an informative and thought provoking webinar on "Components of Data Science " held on 03-09-2020 through Micro Soft Teams App.

It is really a splendid lecture that exposed our students to the field practices. All the students appreciated and got benefitted from your views on the subject.

Looking forward for your cooperation for the promotion of compute education in future as well.

Thanking you.

Yours Sincerely,

PRINCIPAL

B.V. RAJU COLLEGE
VISHNUPUR, BHIMAVARAM-534 202

Components of Data Science

- Learning Approach

Dr DV Ramana
Data Stratagist - Independent
Consultant
Wissen Infotech

Data science is a field that works with and analyzes large amounts of data to provide meaningful information that can be used to make decisions and solve problems.

Data science includes work in computation, statistics, analytics, data mining, and programming.

Data science is a deep study of the massive amount of data, which involves extracting meaningful insights from raw, structured, and unstructured data that is processed using the scientific method, different technologies, and algorithms.

Multidisciplinary field that uses tools and techniques to manipulate the data so that you can find something new and meaningful.

Data Science can be simply defined as the process of analyzing data for making a decision/marketing decision

Data Science is a field that is used to study the relationships existing in a large amount of raw data through the application of various scientific methods to derive some meaningful insights from the data.

Data Science is not a single one domain, it's an interdisciplinary area focusing on analyzing data and finding the best solutions based on them

Data Science is an inclusive analysis, i.e it includes all of the data that you have in order to get the most insightful and complete answer to your questions

Importance of Data Science - Learning

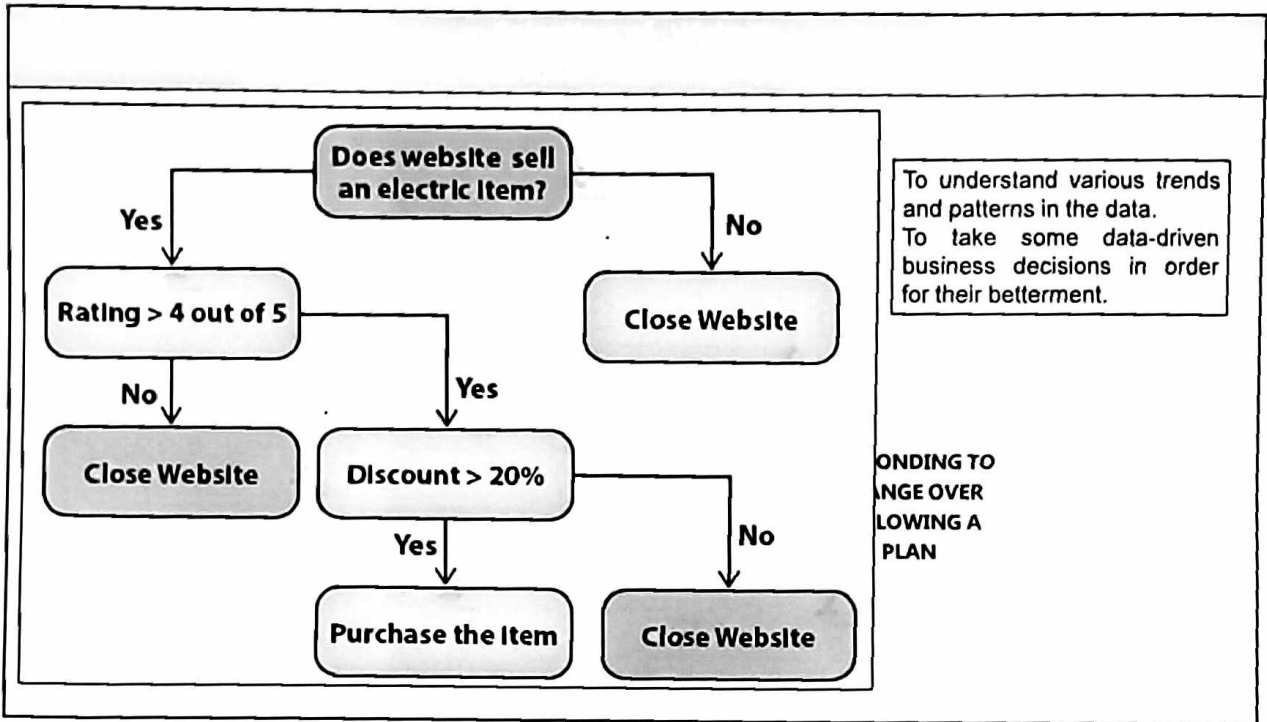

Data science is all about

- Asking the correct questions and analyzing the raw data.
- Modelling the data using various complex and efficient algorithms.
- Visualizing the data to get a better perspective.
- Understanding the data to make better decisions and finding the final result.

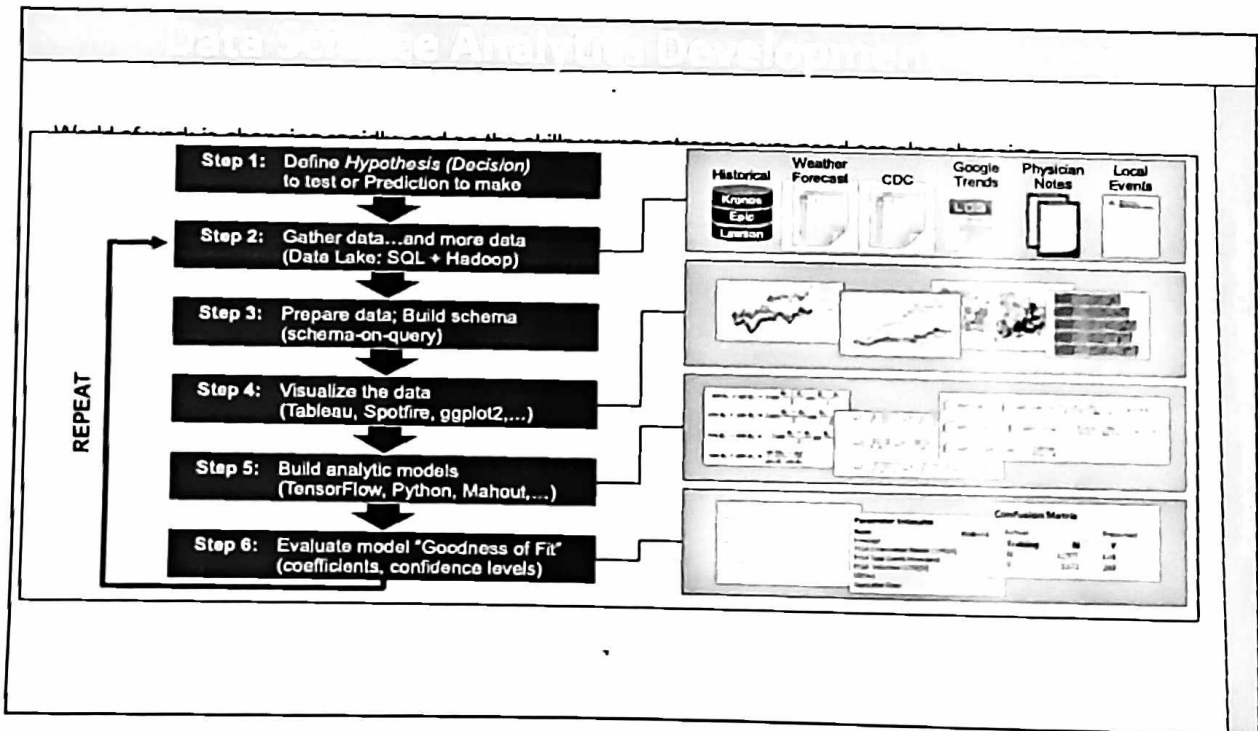

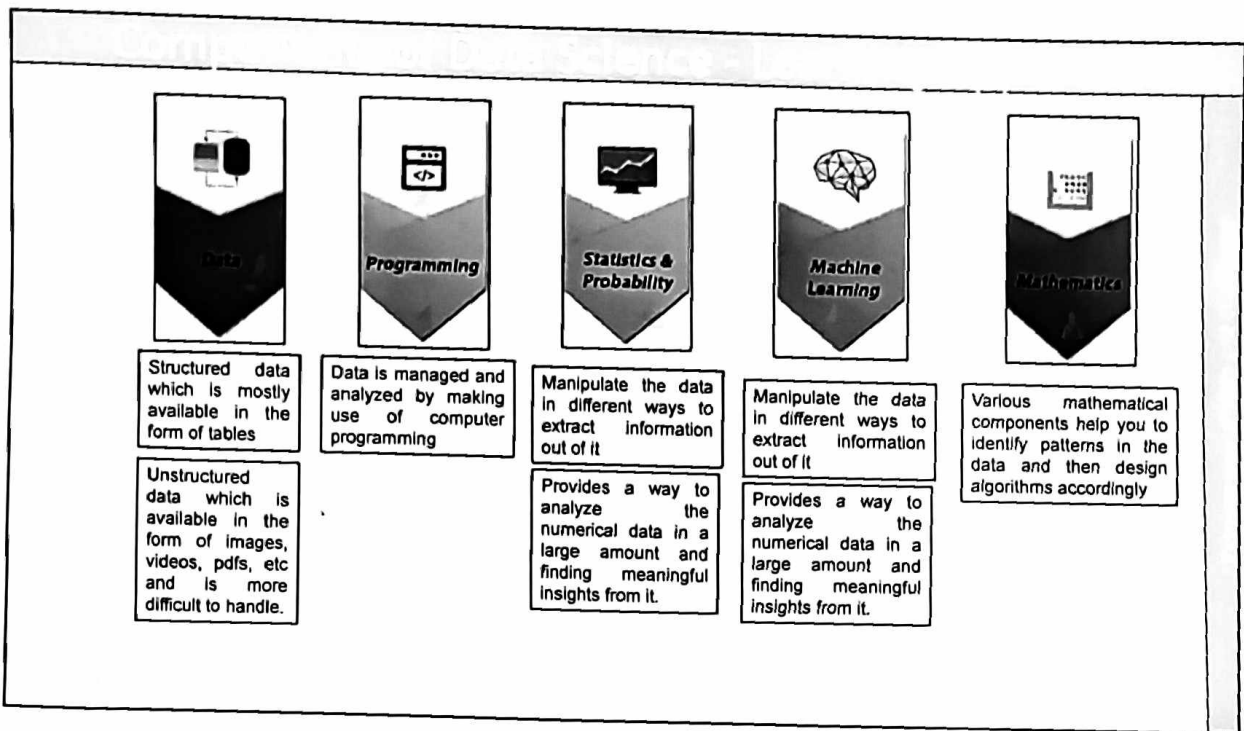

Importance of Data Science - Learning

Data Scientist include:

- To first discover the actual problem and then analyze it in such a way that it can benefit the organization to the fullest.
- To gather a large amount of raw data from discrete sources.
- Altering the large datasets to fetch the data which is relevant to the problem.
- To clean the large datasets and validate it to ensure greater accuracy of the results.
- Finding different patterns, values, and relationships in the data.
- Finally presenting the findings and results of the complete process through data visualization and various other means.

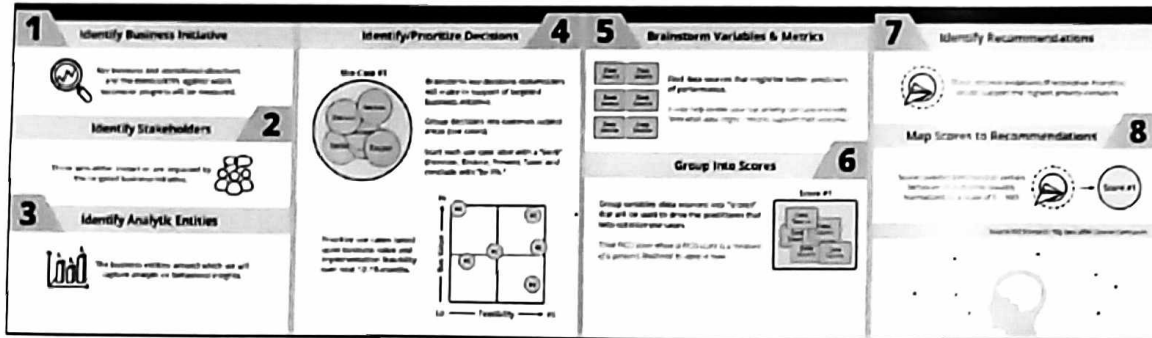

- Helps you set realistic goals.
- Supports decision-making.
- Helps you find your ideal demographic.
- Can segment your audience.
- Helps you create mass personalization
- Increase your revenue and lower your costs.
- helps you monitor social media

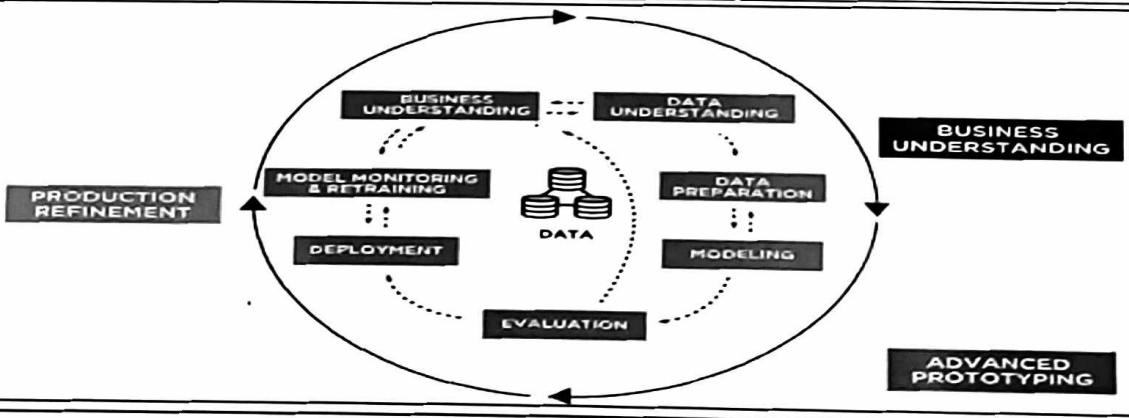

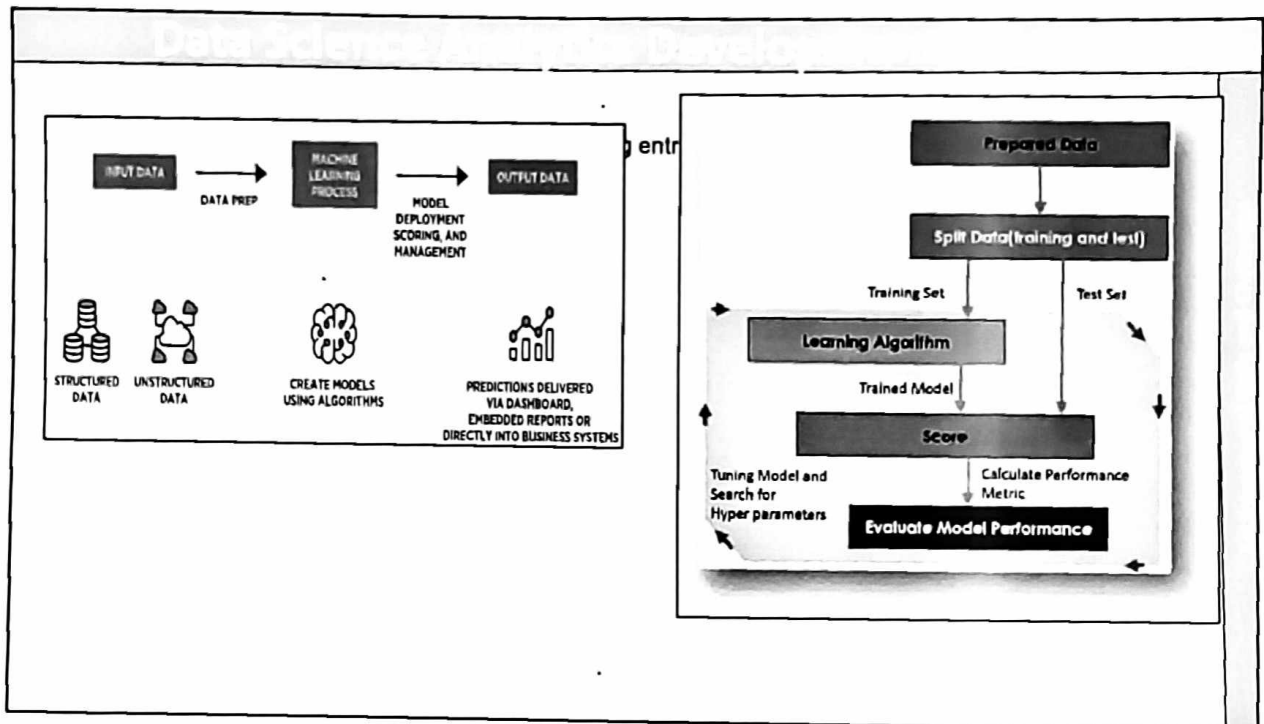

Data Science Analytics Development

World of work is changing rapidly, and so the skills young entrepreneurs need are also changing

Data Science Analytics Development

R programming language:

R is a programming language widely used by Data Scientists and many organizations for data analysis

R language possesses the feature of Object Oriented Programming Language

R programming language is also used for statistical analysis, graphics representations and reporting.

Python programming language:

Python is an Object Oriented Programming Language widely used for Data Science and software development

Python works on different platforms like Windows, Mac, Linux, etc.

Python can also be used to develop several applications like web applications, Graphic User Interface based applications, Scientific and numeric applications, etc.

Structured Query Language (SQL):

Structured Query Language (SQL) is used to create new databases, tables and views. It is used to insert and update records in a database

Structured Query Language (SQL) is also used for deleting records from database and also to retrieve data from a database

Data Scientist uses Structure Query Language (SQL) for managing and querying data stored in the database

Hadoop:

Hadoop is an open source framework used to store and process big data

Hadoop provides Big data analytics through distributed computing framework

Hadoop provides flexibilities as the users don't need to preprocess the data before storing it. You can store as much data as you want and decide later on how much of it you want to use.

Develop Skills In Algebra, Statistics, and ML

Learn to Love (Big) Data

Gain a Thorough Knowledge of Databases

Learn to Code

Master Data Munging, Visualization, and Reporting

Work on Real Projects

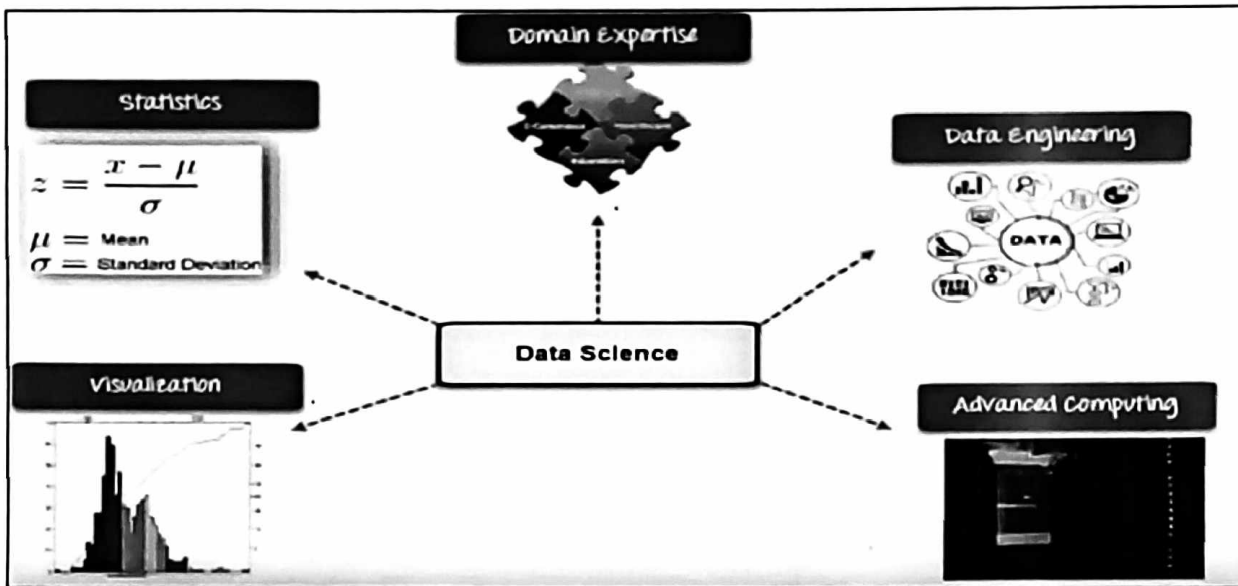

Look for Knowledge Everywhere

Communication Skills

Compete

Stay Up-to-Date With the Data Scientist Community

Basic Skills
